

The OS3 is a revolutionary hidden treasure in the wide world of lighting controllers, conceived with one aim in mind - operational simplicity. Allowing control of up to 350 Dmx channels & 100 Lighting scenes, the OS3 can be programmed to create and manage complex lighting systems, yet access to them is so simple; at the touch of a single button.

Powerful and sophisticated additional features such as daylight sensing, PIR (person in room) and calendar triggers are all included in the compact, elegantly engineered, OS3 package, ensuring total control of the lighting environment with unprecedented simplicity.

The OS3 has been conveniently condensed into a compact panel that can be fitted into any UK specification, single gang wall mounted back box. This gives a unique, flush fit option for any existing environment.

### **Specifications;**

- Stand alone or master/slave operation
- Overall dimensions 86mm (w) x 86mm (h)
- 32 character Blue backlit LED Display
- 350 DMX Channels
- 100 scenes with individual fade times
- 12 Programmable chases of scenes
- 60 steps per chase with programmable speed and fade times
- Grand master function
- 12 backlit user assignable keys
- Programmable back light functions and stealth mode
- Real time clock
- 64 programmable timed events per day on a 7 day week basis
- PIR, daylight sensing and IR remote options to further enhance operational Versatility
- Timed events functionality can enable or disable PIR and daylight sensing
- East locking terminals for fast and reliable installation
- Programming menu PIN lockout, to prevent unauthorised tampering
- Infra Red remote control available (not supplied as standard)
